

**Elapsed Time:** 0.055s

Application execution time is too short. Metrics data may be unreliable. Consider reducing the sampling interval or increasing your application execution time.

<b>Clockticks:</b>	69,660,000
<b>Instructions Retired:</b>	112,320,000
<b>CPI Rate:</b>	0.620
<b>MUX Reliability:</b>	0.921
<b>Retiring:</b>	44.6% of Pipeline Slots
<b>Light Operations:</b>	38.4% of Pipeline Slots
<b>FP Arithmetic:</b>	0.0% of uOps
<b>FP x87:</b>	0.0% of uOps
<b>FP Scalar:</b>	0.0% of uOps
<b>FP Vector:</b>	0.0% of uOps
<b>Other:</b>	100.0% of uOps
<b>Heavy Operations:</b>	6.2% of Pipeline Slots
<b>Microcode Sequencer:</b>	3.2% of Pipeline Slots
<b>Assists:</b>	0.0% of Pipeline Slots
<b>Front-End Bound:</b>	29.1% of Pipeline Slots

Issue: A significant portion of Pipeline Slots is remaining empty due to issues in the Front-End.

Tips: Make sure the code working size is not too large, the code layout does not require too many memory accesses per cycle to get enough instructions for filling four pipeline slots, or check for microcode assists.

<b>Front-End Latency:</b>	7.8% of Pipeline Slots
<b>ICache Misses:</b>	0.0% of Clockticks
<b>ITLB Overhead:</b>	0.8% of Clockticks
<b>Branch Resteers:</b>	0.0% of Clockticks
<b>Mispredicts Resteers:</b>	0.0% of Clockticks
<b>Clears Resteers:</b>	0.0% of Clockticks

<b>Length Changing Prefixes:</b>	0.0% of Clockticks
<b>MS Switches:</b>	0.0% of Clockticks
<b>Front-End Bandwidth:</b>	21.3% of Pipeline Slots

This metric represents a fraction of slots during which CPU was stalled due to front-end bandwidth issues, such as inefficiencies in the instruction decoders or code

restrictions for caching in the DSB (decoded uOps cache). In such cases, the front-end typically delivers a non-optimal amount of uOps to the back-end.

**Front-End Bandwidth MITE:** 23.3% of Clockticks

This metric represents a fraction of cycles during which CPU was stalled due to the MITE fetch pipeline issues, such as inefficiencies in the instruction decoders.

**Front-End Bandwidth DSB:** 0.0% of Clockticks  
**(Info) DSB Coverage:** 51.9%

Issue: A significant fraction of uOps was not delivered by the DSB (known as Decoded ICache or uOp Cache). This may happen if a hot code region is too large to fit into the DSB.

Tips: Consider changing the code layout (for example, via profile-guided optimization) to help your hot regions fit into the DSB.

See the "Optimization for Decoded ICache" section in the Intel 64 and IA-32 Architectures Optimization Reference Manual.

<b>Average CPU Frequency:</b>	1.412 GHz
<b>Total Thread Count:</b>	1

**Paused Time:** 0s

**Effective Physical Core Utilization:** 22.6% (0.902 out of 4)

The metric value is low, which may signal a poor physical CPU cores utilization caused by:

- load imbalance
- threading runtime overhead
- contended synchronization
- thread/process underutilization
- incorrect affinity that utilizes logical cores instead

of physical cores

Explore sub-metrics to estimate the efficiency of MPI and OpenMP parallelism or run the Locks and Waits analysis to identify parallel bottlenecks for other parallel runtimes.

**Effective Logical Core Utilization:** 11.3% (0.902 out of 8)

The metric value is low, which may signal a poor logical CPU cores utilization. Consider improving physical core utilization as the first step and then look at opportunities to utilize logical cores, which in some cases can improve processor throughput and overall performance of multi-threaded applications.

**Serializing Operations:** 7.7% of Clockticks  
**Mixing Vectors:** 0.0% of uOps  
**Cycles of 1 Port Utilized:** 3.9% of Clockticks  
**Cycles of 2 Ports Utilized:** 7.7% of Clockticks  
**Cycles of 3+ Ports Utilized:** 15.4% of Clockticks  
**ALU Operation Utilization:** 27.0% of Clockticks  
**Port 0:** 23.1% of Clockticks  
**Port 1:** 23.1% of Clockticks  
**Port 5:** 23.1% of Clockticks  
**Port 6:** 38.6% of Clockticks  
**Load Operation Utilization:** 23.1% of Clockticks  
**Port 2:** 30.8% of Clockticks  
**Port 3:** 30.8% of Clockticks  
**Store Operation Utilization:** 23.1% of Clockticks  
**Port 4:** 23.1% of Clockticks  
**Port 7:** 7.7% of Clockticks  
**Vector Capacity Usage (FPU):** 0.0%  
**Average CPU Frequency:** 1.296 GHz  
**Total Thread Count:** 1  
**Paused Time:** 0s

**Effective Physical Core Utilization:** 22.6% (0.903 out of 4)

The metric value is low, which may signal a poor physical CPU cores utilization caused by:
 

- load imbalance
- threading runtime overhead
- contended synchronization
- thread/process underutilization
- incorrect affinity that utilizes logical cores instead of physical cores

 Explore sub-metrics to estimate the efficiency of MPI and OpenMP parallelism or run the Locks and Waits analysis to identify parallel bottlenecks for other parallel runtimes.

**Effective Logical Core Utilization:** 11.3% (0.903 out of 8)

The metric value is low, which may signal a poor logical CPU cores utilization. Consider improving physical core utilization as the first step and then look at opportunities to utilize logical cores, which in some cases can improve processor throughput and overall performance of multi-threaded applications.

**Collection and Platform Info:**

**Application Command Line:** ./codecs/hm/decoder/TAppDecoderStatic  
"-b" ".bin/hm/encoder\_lowdelay\_main.cfg/CLASS\_C/  
RaceHorses\_416x240\_30\_QP\_22\_hm.bin"

**User Name:** root

**Operating System:** 5.4.0-72-generic DISTRIB\_ID=Ubuntu  
DISTRIB\_RELEASE=18.04 DISTRIB\_CODENAME=bionic  
DISTRIB\_DESCRIPTION="Ubuntu 18.04.5 LTS"

**Computer Name:** eimon

**Result Size:** 13.0 MB

**Collection start time:** 21:00:53 18/04/2021 UTC

**Collection stop time:** 21:00:54 18/04/2021 UTC

**Collector Type:** Event-based sampling driver

**CPU:**

**Name:** Intel(R) Processor code named Kabylake  
ULX

**Frequency:** 1.992 GHz

**Logical CPU Count:** 8

**Cache Allocation Technology:**

**Level 2 capability:** not detected

**Level 3 capability:** not detected
